

Magnetic Separator

DESCRIPTION

Magnetic separator is a small-scale dedicated magnetic separation tool designed for biological experiments. The product is suitable for separation and purification test, with reasonable design. It is easy to operate due to the separation design of centrifugal tube rack and magnetic strip. It does not need to prepare another ordinary centrifugal tube rack. This product has the characteristics of high magnetic field strength, fast and efficient separation, small and light, strong and durable, etc. It is a necessary device for magnetic bead method in nucleic acid extraction or purification, antibody or protein purification, and immunoprecipitation.

PRODUCT INFORMATION

Type	Magnetic separator
Product	2 wells / 12 wells
Size	0.5-1.5 mL*2 / 15-50 mL*1 / 0.5-1.5 mL*12
Storage	Stored at RT.

Advantage

High magnetic field strength

Fast and efficient separation

Small and light

Strong and durable

Application

Antibody purification

Immunoprecipitation

Cell sorting

Nucleic acid isolation

DNA purification
